

Erratum: “Organophosphate Pesticide Metabolite Concentrations in Urine during Pregnancy and Offspring Nonverbal IQ at Age 6 Years”

Todd A. Jusko, Michiel A. van den Dries, Anjoeka Pronk, Pamela A. Shaw, Mònica Guxens, Suzanne Spaan, Vincent W. Jaddoe, Henning Tiemeier, and Matthew P. Longnecker

Environ Health Perspect 127(1):017007 (2019), <https://doi.org/10.1289/EHP3024>

In Figure 1, the last text box on the right has been corrected from “Exclusion: Mothers without child IQ data” to “Exclusion: Children without nonverbal IQ data.” Spelling and typographical errors also have been corrected in the revised figure.

The “Methods” text included several errors. In the first instance, the second paragraph under “Study Population and Follow-Up” should have indicated that the 16 participants excluded from the lab analyses due to insufficient urine specimens were a subset of the 800 mothers selected for analyses of DAP metabolites, rather than a subset of the 1,998 mother–child pairs with three prenatal urine samples.

A second error occurred in the first paragraph under “Urine Collection and Analysis of DAP Metabolites.” The text “Measured values below the LOD were included in the data analysis when available” has been corrected to “Measured values below the LOD were included in the data analysis.” In addition, the text “expressed as the coefficient of variation” has been corrected to “expressed as the coefficient of variation percent.”

Finally, in the last paragraph under “Statistical Methods,” the text “rather than the multiple imputation method in our primary analyses” has been corrected to “instead of using measured values as in the primary analyses.”

Spelling, grammar, and formatting errors have also been corrected in the “Abstract,” the “Introduction,” and the footnotes below Figure 2.

The online article includes these corrections.
